WCRB 102.5 FM
CLASSICAL RADIO BOSTON

The WCRB Classical Advantage

Dear Bill,

Thanks for the reception report of WCRB 102.5 FM. What you recorded was indeed unmistakably our station. I'd like to know more about your listening post, antenna height, Yamaha tuner specs, and your antenna (Stereo Probe 9?).

About us: We transmit from a TV tower in Needham Mass. Our antenna height above average terrain is 920 feet. Our antenna is a two-bay panel antenna system made by Shively Labs in Bridgton Maine. Our main transmitter is a Harris FM 25 putting out 18.5 kW into 1000 feet of coaxial transmission line to the antenna. Our Effective Radiated Power (ERP) is 15 kW. We have been a classical music station for about 44 years (first on AM, then on 102.5 FM).

Enclosed are a few things for your collection.

Good luck in the DX world!

Yours truly,

David P. Maxson
